

PSYM 3040: Platform Symphony Infrastructure Course

Duration: 1 Day

The Platform Symphony Infrastructure course is designed to give IT infrastructure, system administration and IT security teams an in-depth examination of the environment and infrastructure a Platform Symphony grid assumes and depends, in addition to a brief introduction to the Platform Symphony product. The course will equip the attendees with the necessary knowledge for designing and setting up the Platform Symphony grid from infrastructure (network, data storage, monitoring, etc) and security perspectives.

Who Should Attend

This course is designed for IT infrastructure, system administration and security personnel.

Course Pre-requisite

Attendees should be familiar with UNIX/Linux and/or Windows operating systems and have basic system administration skills. Previous experience with Grid Computing technologies and solutions is beneficial but not required.

Course Materials

All participants will receive a copy of the training manual.

Course Content

- Symphony Overview
- Symphony Messaging and Flow
- Symphony Footprint
- Symphony Security
- Symphony Network Setup
- Symphony Monitoring
- Symphony WAN Support
- Symphony Failover
